**natural.renewable.sustainable.transformational.**

Carbon is Earth's most basic chemical building block. It is found in all living things, forming proteins, lipids, nucleic acids and carbohydrates. Carbon is essential to life, and without it, nothing grows.

Soil needs carbon, as it enables the retention of water and nutrients, helps prevent compaction and promotes healthy root structures.

The rich, black carbon in Pro-C™ alters soil's physical structure to provide an ideal habitat for beneficial microbes.

Pro-C™ is ideal for ornamentals, vegetables, trees and turfgrass, From commercial growing to residential landscapes, carbon makes all the difference.

Created by carbonizing renewable organics like wood and grass, Pro-C is a safe and natural product made in the U.S.A. for long-term gains in soil fertility and plant performance.

## The Pro-C Difference

**STIMULATES PLANT GROWTH**

**BOOSTS DROUGHT TOLERANCE**

**ENHANCES MICROBIAL LIFE**

**IMPROVES AERATION & PERMEABILITY**

**BINDS SOIL CONTAMINANTS**

**SUSTAINS LONG-LASTING FERTILITY**

**Proton Power** INC.
