

# carbon soil enhancer

pro

## The Pro-C Difference

-  **STIMULATES PLANT GROWTH**
-  **BOOSTS DROUGHT TOLERANCE**
-  **ENHANCES MICROBIAL LIFE**
-  **IMPROVES AERATION & PERMEABILITY**
-  **BINDS SOIL CONTAMINANTS**
-  **SUSTAINS LONG-LASTING FERTILITY**

## Application

*As a rule of thumb, we recommend applying 5-10% Pro-C by volume to the root zone.*

**TURFGRASS:** Spread 5 to 10 cu ft per 1000 sq ft and soak thoroughly.

**TREES:** Add 1 part to 9 parts topsoil when backfilling planting hole.

**GARDENS:** Use 1 cu ft per 30 sq ft at 4 inch depth.

**CONTAINERS:** Mix 1 part with 9 parts growing media.

Carbon is Earth's most basic chemical building block. It is found in all living things, forming proteins, lipids, nucleic acids and carbohydrates. Carbon is essential to life, and without it, nothing grows.

Soil needs carbon, as it enables the retention of water and nutrients, helps prevent compaction and promotes healthy root structures.

The rich, black carbon in Pro-C™ alters soil's physical structure to provide an ideal habitat for beneficial microbes.

Pro-C is ideal for turfgrass, trees, ornamentals, vegetables, and container production. From commercial growing to residential landscapes, carbon makes all the difference.

Created by carbonizing renewable organics like wood and grass, Pro-C is a safe and natural product made in the U.S.A. for long-term gains in soil fertility and plant performance.
