

pro

pots & containers

- 1 Select a pot or container with adequate drainage.
- 2 Add 1 part Pro-C™ Carbon Soil Enhancer to 9 parts potting soil. Mix evenly.
- 3 Gently set root ball into container and backfill with mix. Water well.
- 4 Position for the desired amount of sunlight.
- 5 When watering, do so thoroughly until liquid seeps out of the container drain. Keep soil moist, but not saturated.

beds & gardens

- 1 Apply 1 cu ft (28L) of Pro-C™ Carbon Soil Enhancer for every 30 sq ft of area.
- 2 Spread evenly over topsoil, then work in Pro-C down to 4" depth.
- 3 Plant, then water generously. Apply organic fertilizers as needed.
- 4 Water 1 to 2 inches per week, depending on rainfall, temperature and plant type.

lawn care

- 1 To prepare, mow lawn short and remove grass clippings.
- 2 For best results, aerate prior to using Pro-C™ Carbon Soil Enhancer.
- 3 Apply Pro-C™ by itself, or blend with other topdressing materials. Spread 5 to 10 cu ft of Pro-C™ per 1000 sq ft.
- 4 Following application, water lawn thoroughly to allow the product to sink in.
- 5 If overseeding, spread seed and cover up with a
- 6 Water new grass lightly and frequently at first to keep moist and promote germination.
- 7 Maintain by watering in the morning.
